MycoSoothe contains some natural elements that contribute to its effectiveness in preventing fungal outbreaks and alleviating the symptoms of fungal infections, including:

### **Vitamin**

Vitamin C plays a pivotal role in supporting immune function and preventing fungal outbreaks. This water-soluble vitamin acts as a potent antioxidant, neutralizing free radicals that can compromise the immune system. It enhances the production and function of white blood cells, crucial components of the body's defense mechanism against infections.

Vitamin C also helps stimulate the production of interferons, proteins that inhibit the replication of viruses, including those causing fungal infections.

Additionally, vitamin C promotes the synthesis of collagen, which is essential for maintaining the integrity of the skin and mucous membranes, acting as a physical barrier against fungal invaders.

### **Selenium**

Selenium helps in enhancing the activity of immune cells, such as macrophages and natural killer cells, which are pivotal in combating fungal infections.

Selenium's antifungal properties are attributed to its role in the activation of enzymes that help break down fungal cell walls. This mechanism prevents the proliferation of fungi in the body.
